

FISKER Ocean Product Guide

Fully electric crossover SUV with that extra something for everyday use – designed in California. Made in Austria.

Limited FINAL EDITION for connoisseurs and enthusiasts: the ultimate last vehicles, now sold exclusively in Germany, Austria, and the UK (RHD only).

The vehicles have been upgraded to the latest technical standards by the FISKER factory team in Graz, are preconfigured, and can only be purchased in their respective configurations and with their respective equipment.

Exclusive features of the FINAL EDITION:

- Technical retrofitting of all affected parts from known recall campaigns (e.g. water pumps) and elimination of known problems (e.g. corrosion risk of the connectors in the wheel arch)
- Tyres 20"(Sport) / 22" Inches (Ultra, Extreme / One)¹
- Floor mats, boot cover
- 2 x Key Fobs + NFC Card
- Upgrade to OS2.6 incl. Android Auto and Hardware / Software for Apple CarPlay functionality
- 4 years of registration for the OceanLoop service of the partner OVLoop Inc (including T-Mobile Internet, continuous software updates, new mobile app for Apple and Android)
- 5-year supply for spare parts (subject to availability)
- Plaque with serial number of the FINAL EDITION
- Merchandising Kit FINAL EDITION incl. a folder for documents and charging cards
- Personal instruction on the intricacies of the vehicle by Fisker engineers
- Exclusive hotline service for FINAL EDITION Drivers

¹ Planned standard Summer tyres, deviations possible; Winter tyres can be purchased in addition.

Side-by-Side Trim Comparisons

	Sport	Ultra	Extreme
	A striking balance of performance, range, and affordability.	Dynamic, powerful, and ready for open-air adventure.	Extreme luxury. Extreme performance. Extreme thrills.
Range (calculated)	464 km / 288 miles UK ⁽¹⁾	690 km / 429 miles UK ⁽¹⁾	707 km / 439 miles UK ⁽¹⁾

Modern SUV Design—The Sleek Shape of Things to Come.

Image, Sea Salt, White Alcantara

California Mode—Now Streaming: Fresh Air.

Push a button, and eight glass panels open simultaneously to transform a versatile SUV into a coastline-cruising convertible. With our exclusive California Mode, you can drop the front windows, both rear-seat windows, both Doggie Windows, and the Rear Lift Gate Window while opening the SolarSky roof or OpenSky roof at the same time.

Standard on Trim: Ultra und Extreme

Revolve—A Screen That's Revolutionary.

Topping off at the charging station has never been more rewarding. Stay entertained with Revolve, a 17.1" revolutionary rotating touchscreen that provides total vehicle control and includes Hollywood Mode, which allows you to watch movies and videos in a 16:9, surround-sound cinematic format.

Standard on Trim: Sport, Ultra, and Extreme

Spacious Interior in Three Colour Variants

Powered solely by electricity, the Fisker Ocean's drivetrain and critical systems take up less space than the ones in gas-powered vehicles, freeing us to design without the constraints of traditional SUV packaging. Ingenious configuring maxes out the interior with a spacious cabin, seating for five adults, and flexible storage for surfboards, camping gear, pet carriers, and more.

Colour variants: Black Abyss (sporty and comfortable, racy due to dark metallic accents) | Sea Salt White Alcantara (luxurious texture with bright metallic accents, high UV resistance) | MaliBlu Indigo Alcantara (rich blue tones with bright metallic accents and black carpeting)

Note: Colour variant is preconfigured on each vehicle and cannot be changed.

Sustainable Materials—How It's Made Matters.

The Fisker Ocean features a beautifully crafted interior with recycled and ethically sourced materials throughout. The eco-friendly cabin of each trim features fabrics like Alcantara®, Ultrasuede®, FeelTek®, EcoFabric, and recycled carpeting, all made using recycled plastic bottles and other recycled polymers.

Using recycled material wherever possible lowers the carbon footprint of producing these durable and beautiful luxury fabrics. In total, the Fisker Ocean has more than 50 kg / 110 lb of recycled polymers and bio-based materials.

Note: Preconfigured on each vehicle and cannot be changed.

Fisker Pulse Audio System Powered By ELS STUDIO 3D®—Catch Some Epic Soundwaves.

Get your electric motor running, head out on the highway, and experience your favourite music on the premium Fisker Pulse Audio System Powered By ELS STUDIO 3D®*. With 575 watts of power, DJX™ 3D Surround, 15 speakers, a 19L subwoofer, and one of the most effective 6 speaker dashboard arrays of its kind, the Fisker Pulse system immerses the driver and passengers in a glorious sea of 360° sound.

Standard on Trim: Extreme

* ELS STUDIO 3D® is a registered trademark of Panasonic Corporation of North America. All rights reserved.

Digital Rear View Mirror

The Digital Rear View Mirror works like a conventional mirror, reflecting what's behind you. But then, flip a switch and get a clever second option: a digital display from the wide-angle high-definition camera mounted below the rear spoiler. Protected from the elements, the camera gives a wider field of vision than the standard optical mirror.

With a full cargo area or three passengers in the back, you still have an unobstructed view behind you, driving forward or reversing. Enjoy better rear-view clarity during night driving and eliminate headlights behind you reflecting into your eyes.

Taco Tray

A driver side Taco Tray unfolds from the center console and swivels into place, and a passenger tray that pops out of the dashboard. Both are perfectly positioned to use for business or pleasure while the car is parked.

Driver side: standard on Extreme trim.

Passenger side: standard on all trims

Under Seat Storage Box

An easy to reach Under Seat Storage Box, standard on the Fisker Ocean One and Extreme, offers a smart design solution for storage. On both driver and passenger sides, occupants can store important papers in a roomy compartment with a latching door.

Standard on Extreme trim.

Automatic Vehicle Hold

When stopped with the brake pedal depressed, Automatic Vehicle Hold maintains brake pressure to keep the vehicle stationary (for up to 5 minutes) after the driver releases the brake pedal, until the driver presses the accelerator pedal enough to begin moving the vehicle. After 5 minutes without pressing the accelerator Automatic Vehicle Hold will activate the vehicle's parking brake.

Over-the-Air (OTA) Upgrades

The driving experience of a Fisker is simple, intuitive and enjoyable. With over-the-air software upgrades, Fisker electric vehicles become smarter, safer and more powerful over the life of the vehicle.

This is an extra to be paid service from our partner OVLoop. For more information, please visit: <https://ocean.ovloop.com>.

FINAL EDITION includes a 4-years-subscription to OVLoop services.

Tires

The tires of the Fisker Ocean are equipped with Bridgestone's "ENLITEN" technology, which both minimizes rolling resistance by up to 30% and reduces weight by up to 20%. The lower rolling resistance reduces friction on the road, which improves range without sacrificing traction.

Note: Preconfigured for each vehicle

Premium Rim Design

Fisker Ocean alloy wheels are designed for superior performance and are inspired by art and engineering. For example, 20-inch F7 AeroStealth rims with optimized coverage for aerodynamic performance or the 22-inch F3 Slipstream rims provide exceptional control and an imposing presence on the road.

Note: Preconfigured for each vehicle

Exemplary image, SlipStream Black

Batteries

The Fisker Hyper Range and Touring Range battery packs are designed to deliver excellent range and are optimized as an integral part of the vehicle structure to deliver optimal crashworthiness. Fisker uses the vehicle frame to give the battery pack strength and rigidity, leaving the maximum space within the pack to fit energy-storing cells. This space-saving concept minimizes the total volume of the powertrain, leaving more vehicle interior space for a roomier cabin.

Regenerative Braking

Regenerative Braking captures kinetic energy from deceleration of the vehicle and uses that energy to replenish battery charge. When the vehicle is moving and your foot is off the accelerator, the spinning motor becomes a generator which pushes charge back into the high voltage battery. At the same time, the electrical drag from spinning the motors in their generator mode slows the vehicle, acting as an electrical brake.

Drivers can select from three levels of Regenerative Braking:

- **Low:** Provides the minimum amount of regenerative braking. When you release the accelerator, the vehicle takes longer to slow down and coasts further than if set to Medium.
- **Medium:** Provides the standard amount of regenerative braking.
- **High:** Provides the maximum amount of regenerative braking. When you release the accelerator, the vehicle slows down faster, reducing the need to use the brakes.

While you should still use the brake pedal whenever needed to stop safely, you can take advantage of Regenerative Braking by anticipating your stops and reducing or removing pressure from the accelerator pedal to slow down. When gaining power through regeneration, the background of the Driver Display displays a blue ripple that moves inward.

Performance – The Drive Modes

Fisker Ocean's Drive Modes let drivers choose from three powertrain tuning profiles to customize their drive for efficiency, fun, and performance.

Earth Mode—maximizing vehicle range and driving comfort.

- Earth Mode moderates acceleration demand on both AWD and FWD powertrains to conserve battery power.
- Designed for maximum energy efficiency, Earth Mode uses the front drive unit only on dual motor All-wheel drive (AWD) equipped trims.
- When in Earth Mode, drivers can set Regenerative Braking to "high" to ensure maximum energy recapture for greatest energy efficiency.
- Heating, AC, and other comfort/convenience systems operate at reduced power consumption, and steering assistance is optimized for minimal energy consumption.

Fun Mode—balancing comfort, performance, and energy efficiency.

- Fun Mode tunes both AWD and FWD powertrains for brisk on-demand acceleration.
- In AWD trims, Fun Mode delivers full-time 45:55 front/rear torque distribution.
- Electronic Stability Control (ESC) ensures maximum traction and controls wheel slip, to achieve optimal acceleration and deceleration.

Hyper Mode—Fisker Ocean's high performance drive mode.

- Hyper Mode ramps up both AWD and FWD powertrains for immediate acceleration.
- Steering Assistance is tuned for enhanced vehicle dynamics.
- In AWD trims, Hyper Mode delivers full-time 45:55 Nm front/rear torque distribution for increased performance and handling.
- Electronic Stability Control (ESC) ensures maximum traction and controls wheel slip, to achieve optimal acceleration and deceleration.

Standard on Ultra and Extreme trim.

Boost Mode—maximizing the Fisker Ocean's acceleration.

When Boost Mode is engaged and the Ocean is rolling slowly (under 4 mph) or at a stop, fully pressing the accelerator pedal makes enhanced torque available for maximum 0-60 mph acceleration. Boost Mode is available when Fisker Ocean is in Hyper Mode. To protect the longevity of the powertrain, uses of Boost Mode are electronically capped at 500 activations.

Available on All trims.
